

Getting Started Guide

Design and Create 3D PDF Documents

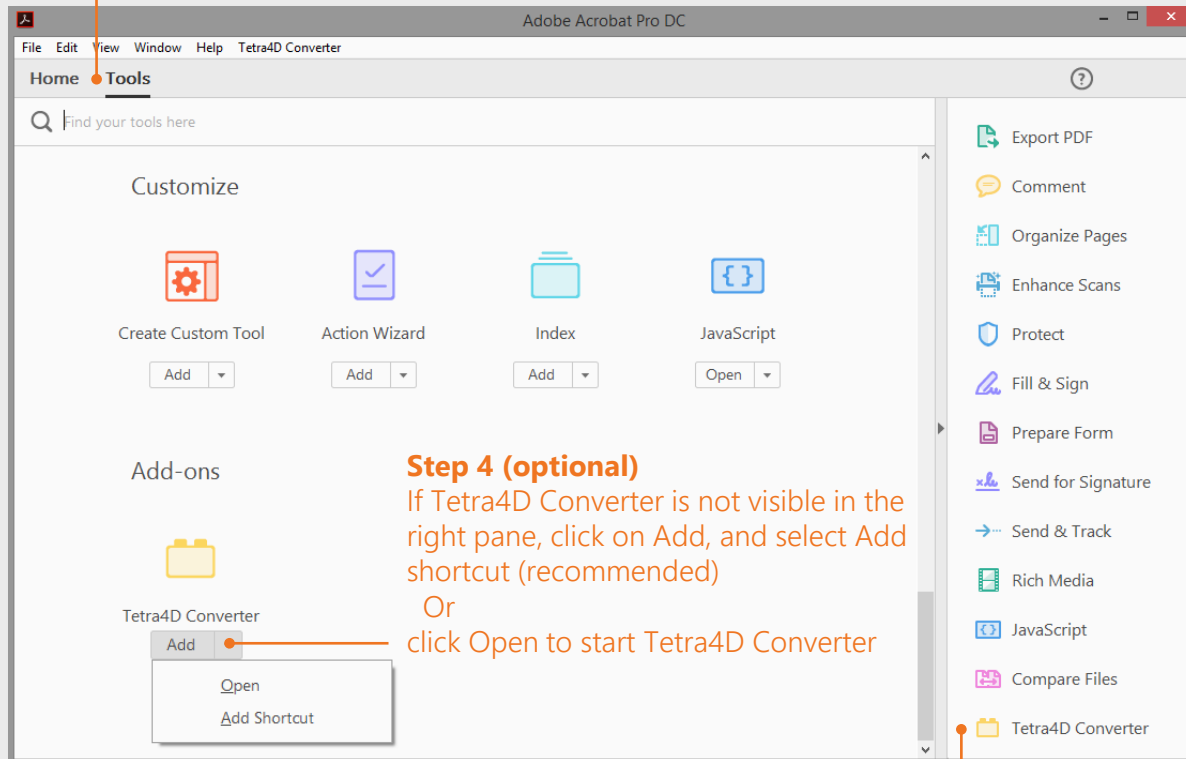

Tetra4D Converter - Add in for Adobe® Acrobat® Pro

Step 1

After the installation of Tetra4D Converter, start Acrobat

Step 2

Click on Tools in the main Acrobat toolbar to access to the Acrobat features and to the installed Add-ons

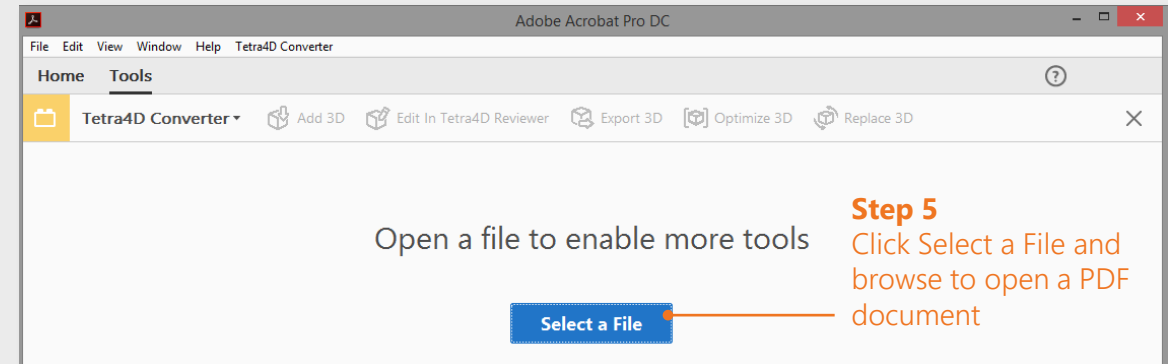

**Step 4 (optional)**

If Tetra4D Converter is not visible in the right pane, click on Add, and select Add shortcut (recommended)

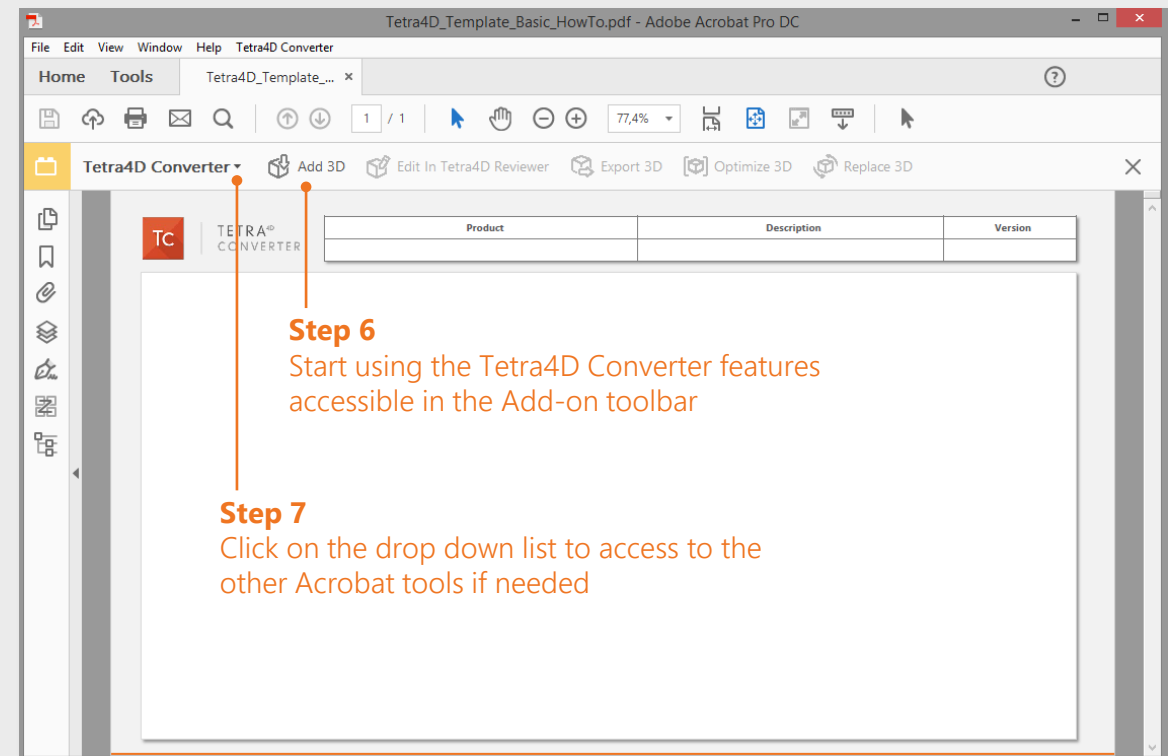

Or click Open to start Tetra4D Converter

Step 3

Click Tetra4D Converter in the right pane (all the installed and activated add-ons should be listed)

**Step 5**

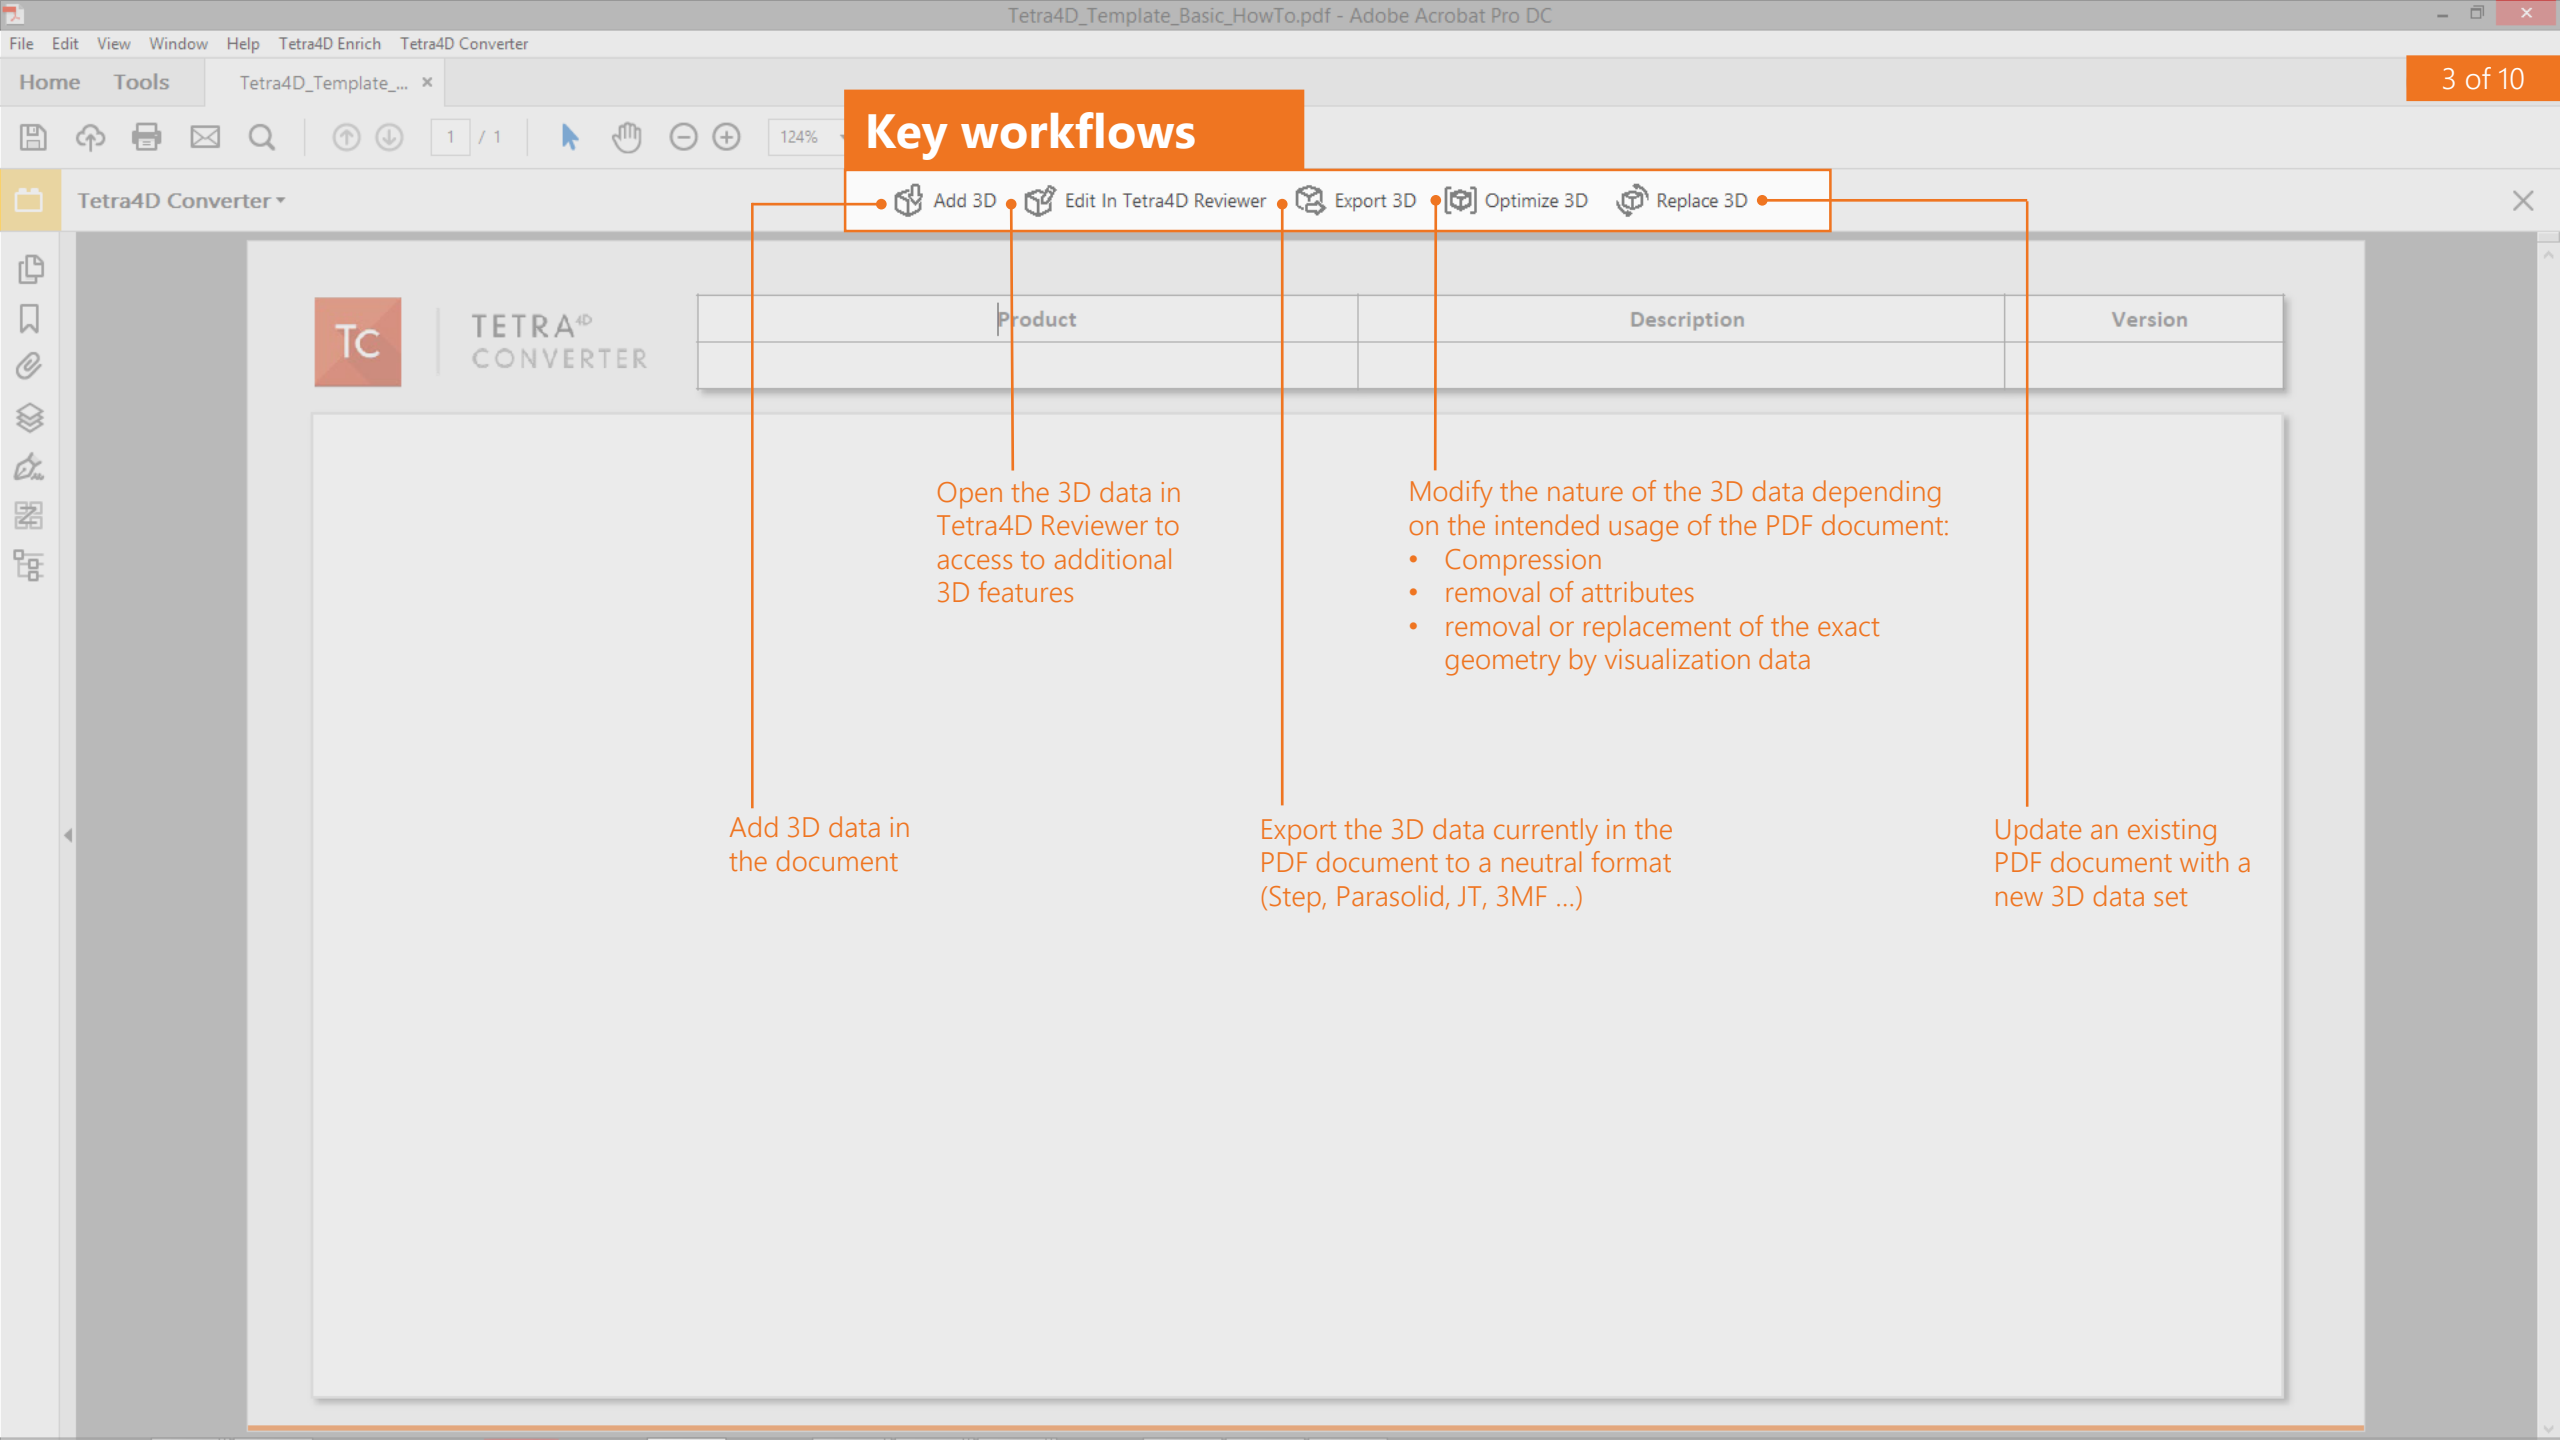

Click Select a File and browse to open a PDF document

**Step 6**

Start using the Tetra4D Converter features accessible in the Add-on toolbar

Step 7

Click on the drop down list to access to the other Acrobat tools if needed

Key workflows

• Add 3D • Edit In Tetra4D Reviewer • Export 3D • Optimize 3D • Replace 3D

Add 3D data in the document

Open the 3D data in Tetra4D Reviewer to access to additional 3D features

Export the 3D data currently in the PDF document to a neutral format (Step, Parasolid, JT, 3MF ...)

Modify the nature of the 3D data depending on the intended usage of the PDF document:

- Compression
- removal of attributes
- removal or replacement of the exact geometry by visualization data

Update an existing PDF document with a new 3D data set

Step 7

Save the document

Step 1
Click Add 3D

Add 3D data in the PDF document

- **Step 2**
Drag a rectangle to position the 3D view

Step 3

Browse and select the 3D file to import

Micro engine.CatProduct

Step 4

Select the Visualization / High Quality predefined conversion settings

Step 5

Change the pre-defined settings to the values shown below

Tetra4D Converter

3D Conversion Settings

Collaboration

Description: CATIA V5: The Collaboration conversion settings are recommended for 3D-based collaboration workflows. Using this preset will

General | Document | Import | Optimize

Display

Default Background Color:

Default Lighting: Lights from File

Default Rendering Style: Solid

Default Animation Style: Loop

Default View

Projection: Perspective

Orientation: Acrobat

Navigation

☒ Add Default Views: Left, Top, Front, Right, Bottom

☒ Show 3D toolbar by default

☐ Open model tree by default

Default Script

<None Selected> Browse... Clear

☐ Don't display dialog during conversion

OK Cancel

30 Conversion Settings

Custom

Description CATIA V5 : Custom is selected whenever you change any of the conversion settings. Click the "+" button to save these settings for future

General Document Import Optimize

Display

Default Background Color: ☐

Default Lighting: Lights from File

Default Rendering Style: Solid

Default Animation Style: Loop

Default View

Projection: Perspective

Orientation: Catia V5

Navigation

☒ Add Default Views Left, Top, Front, Right, Bottom

☒ Show 3D toolbar by default ☐ Open model tree by default

Default Script

<None Selected> Browse... Clear

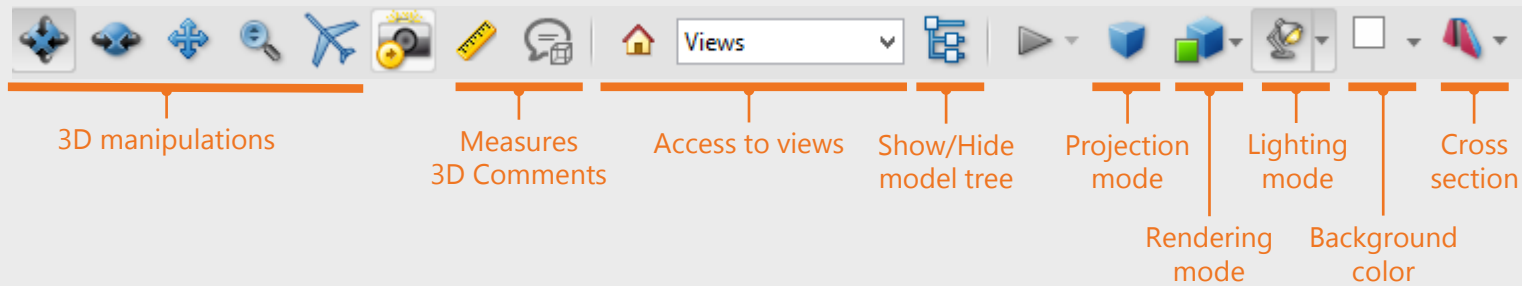

☐ Don't display dialog during conversion

OK Cancel

Step 6
Click on validate settings for the CATIA V5

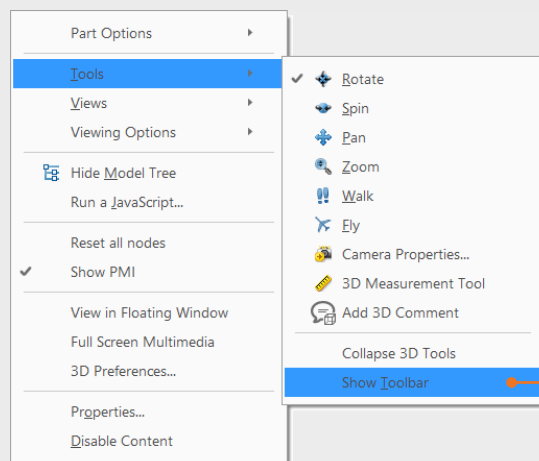

Step 6
Click on OK to validate the settings and read the CAD file

Manipulate the model and change display settings with mouse buttons and 3D Toolbar features

Step 1

Click in the 3D annotation to activate it

Step 2

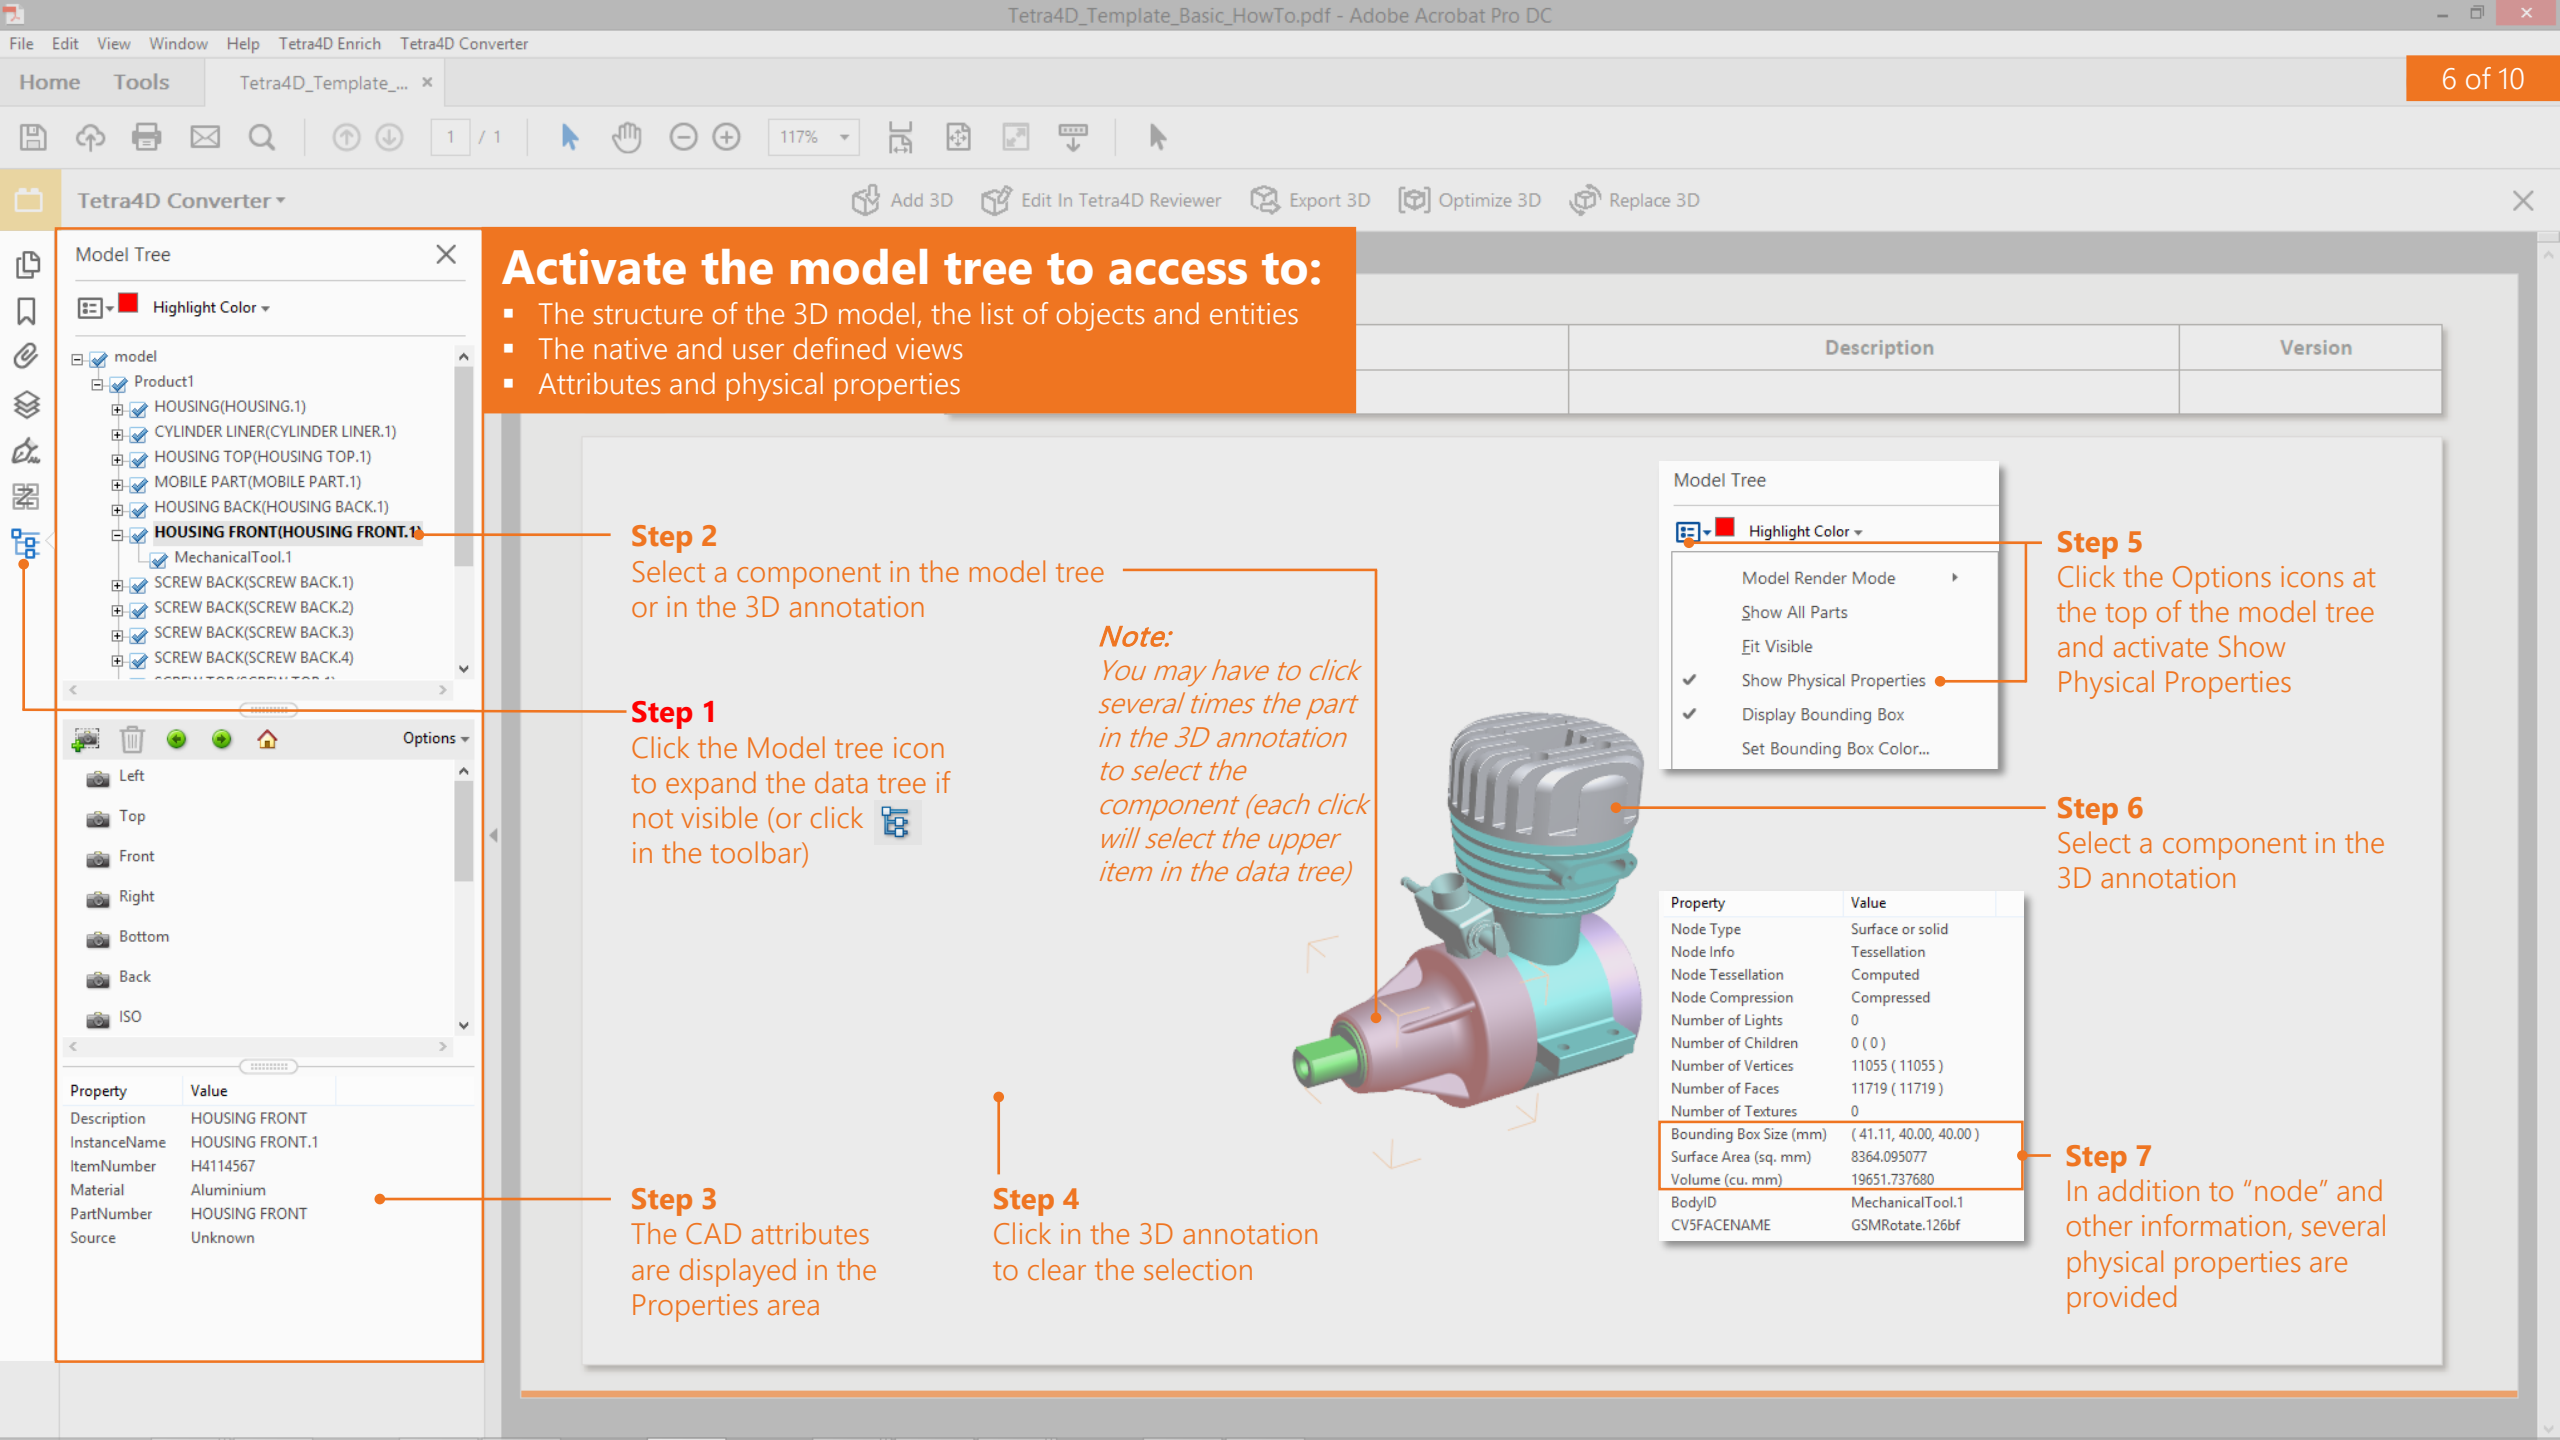

If the 3D Toolbar is not visible, make a right-click inside the 3D annotation and select Tools > Show Toolbar

Step 3

Use the mouse buttons to manipulate the 3D

Activate the model tree to access to:

- The structure of the 3D model, the list of objects and entities
- The native and user defined views
- Attributes and physical properties

Step 2

Select a component in the model tree or in the 3D annotation

Step 1

Click the Model tree icon to expand the data tree if not visible (or click  in the toolbar)

Step 3

The CAD attributes are displayed in the Properties area

Note:

You may have to click several times the part in the 3D annotation to select the component (each click will select the upper item in the data tree)

Step 4

Click in the 3D annotation to clear the selection

Step 5

Click the Options icons at the top of the model tree and activate Show Physical Properties

Step 6

Select a component in the 3D annotation

Step 7

In addition to "node" and other information, several physical properties are provided

Property	Value
Node Type	Surface or solid
Node Info	Tessellation
Node Tessellation	Computed
Node Compression	Compressed
Number of Lights	0
Number of Children	0 (0)
Number of Vertices	11055 (11055)
Number of Faces	11719 (11719)
Number of Textures	0
Bounding Box Size (mm)	(41.11, 40.00, 40.00)
Surface Area (sq. mm)	8364.095077
Volume (cu. mm)	19651.737680
BodyID	MechanicalTool.1
CV5FACENAME	GSMRotate.126bf

Select a component or sub-assembly in the model tree and make a right-click

Select the Isolate function
(only selection will remain visible)

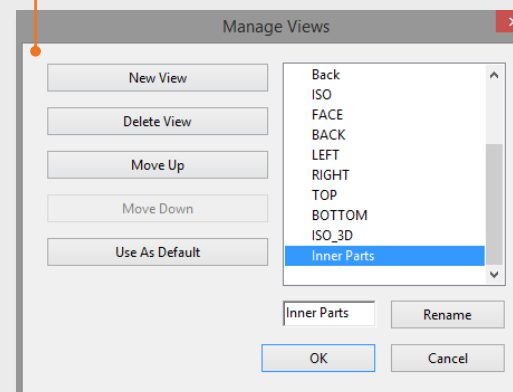

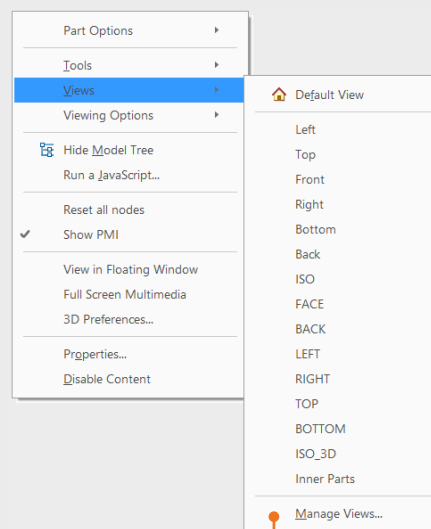

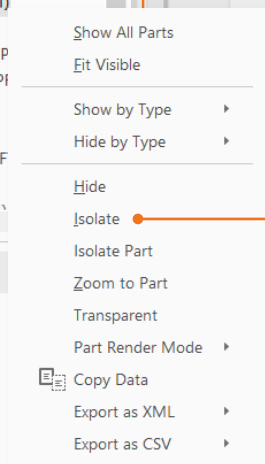

- Access to the new view at the bottom of the list of views
- Make a double-click on it to rename it.
(alternative in Step 5)

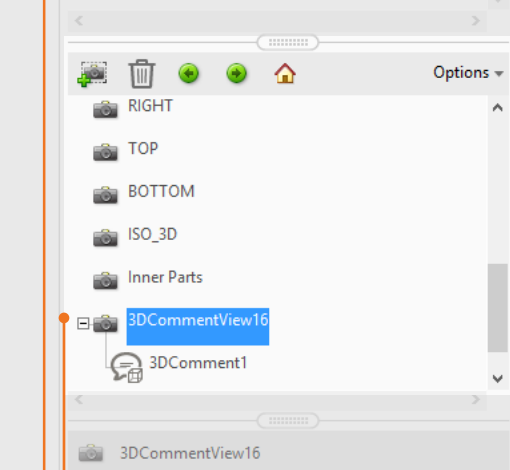

Click on the Create view icon

Make a right-click in the 3D annotation

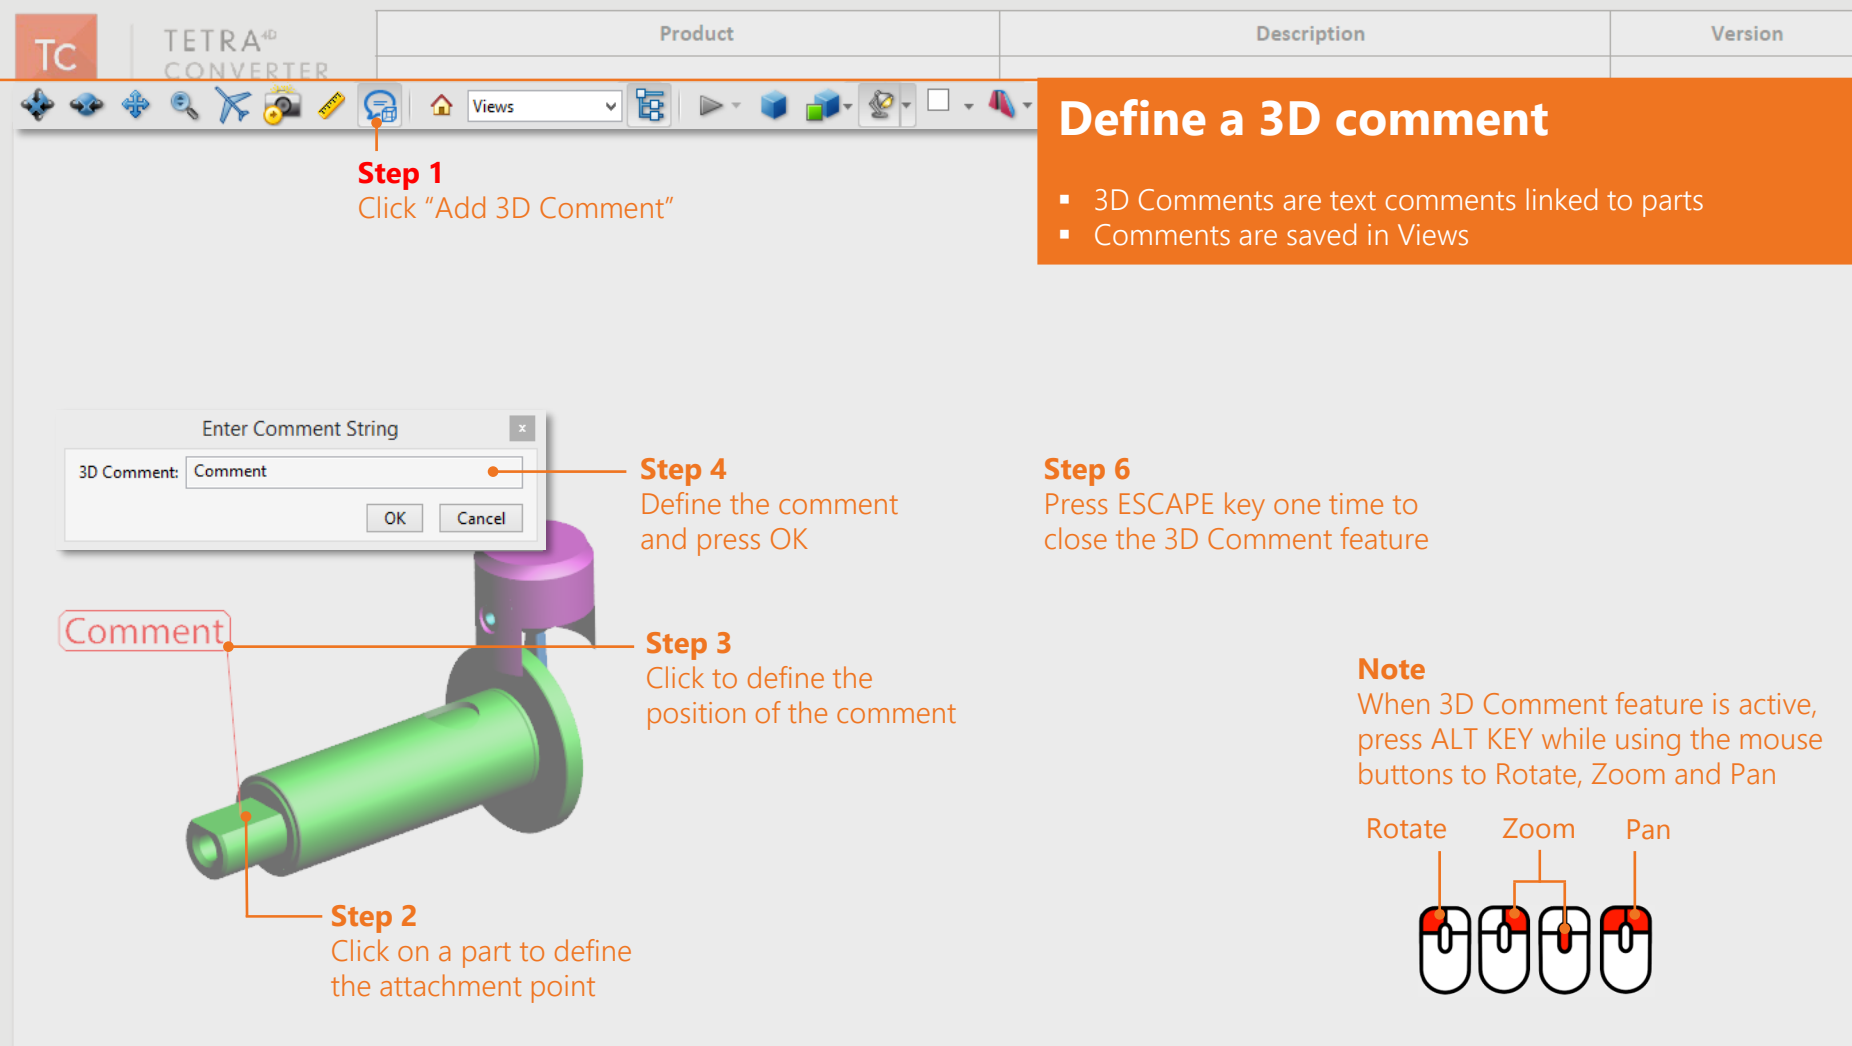

Select a view in the Manage view dialog and click on the buttons to reorder the views, delete one or rename one

Select the menu
Views > Manage views...

Note that a view is automatically created to enable to access to the comment afterwards

- 3D Comments are text comments linked to parts
- Comments are saved in Views

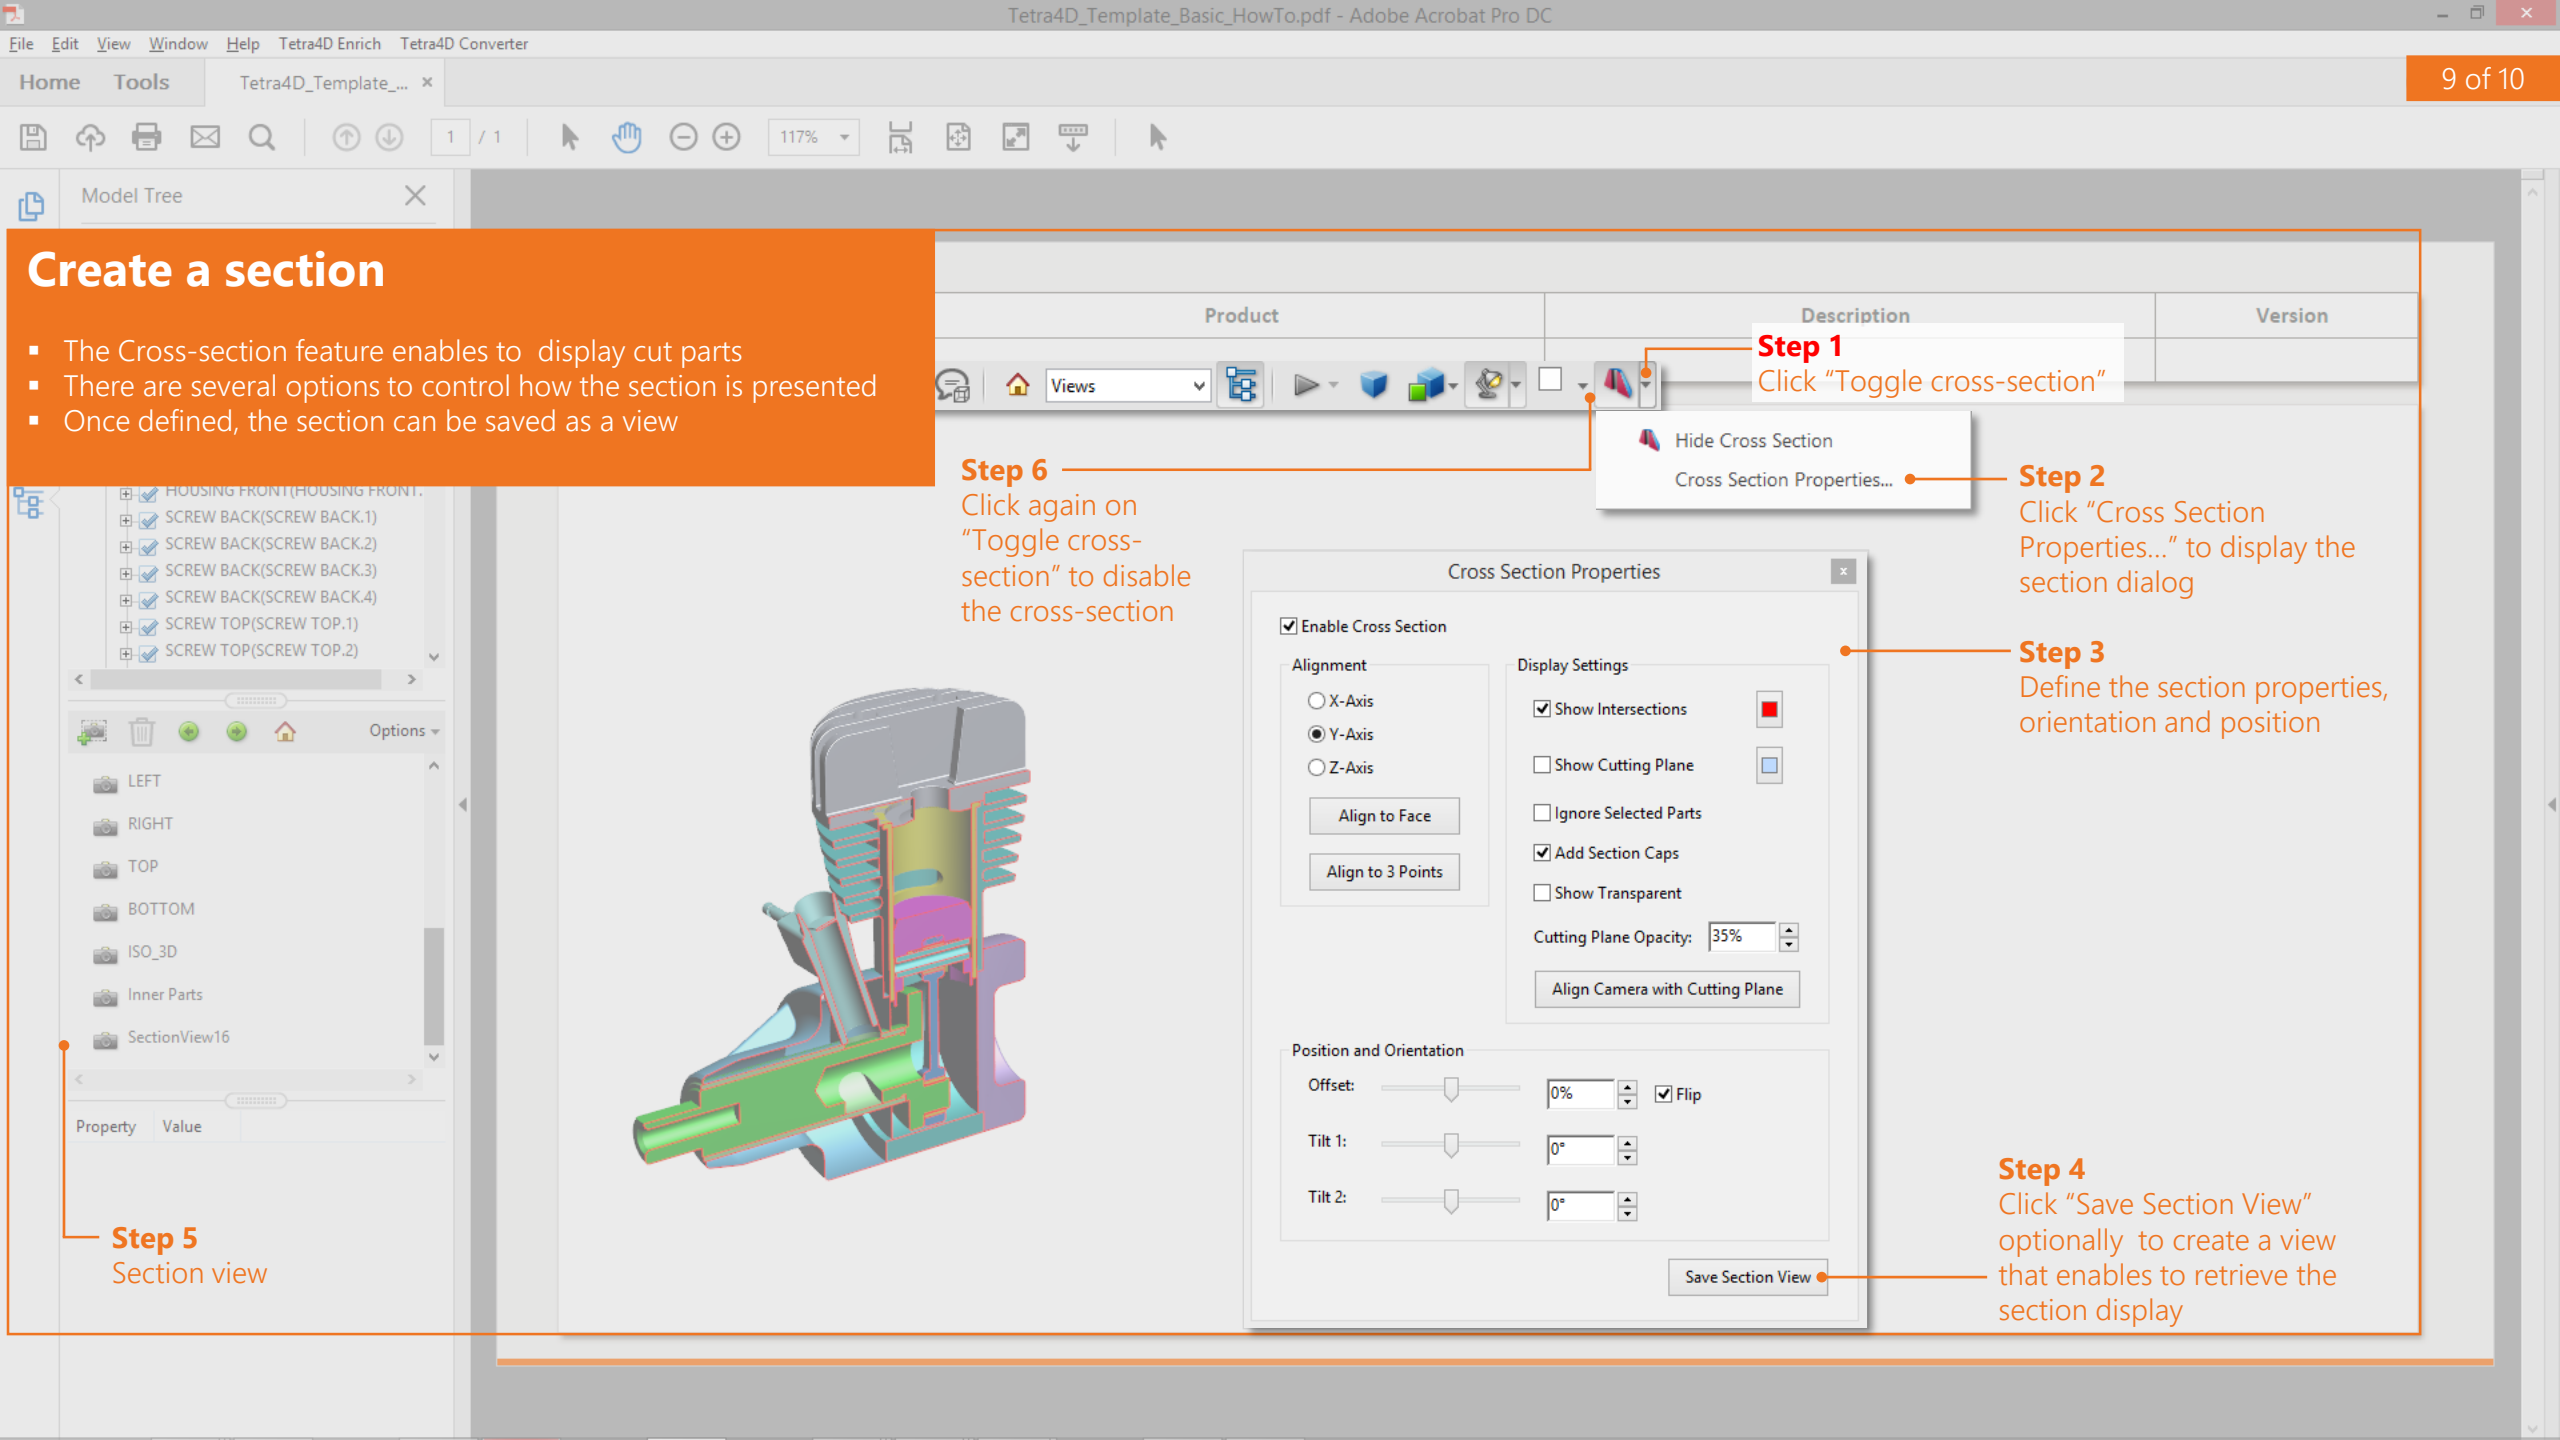

Step 6

Press ESCAPE key one time to close the 3D Comment feature

Note

When 3D Comment feature is active, press ALT KEY while using the mouse buttons to Rotate, Zoom and Pan

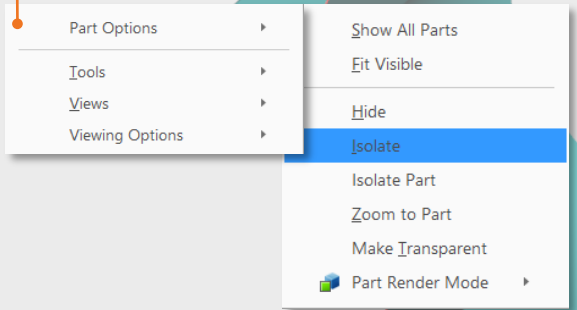

Create Measures

- The 3D Measurement tools make it possible to create different types of measures, based on the 3D parts.
- Snapping filters help to select entities (linear, circular edges, planar faces...)
- The measures are saved in views (automatically created)

Step 3
Click "3D Measurement Tool"

Step 1
Select the part Housing in the 3D annotation

Step 2
Make a right-click and select Part Options > Isolate

Note
Press ALT KEY While using mouse buttons

Step 4
Select the snap filter: Radial Edge
Select the measurement type: Radial Dimension

Step 7
Select the snap filter: Radial Edge
Select the measurement type: Point to Point

Step 8
Click the two circular edges
Click on the screen to position the measure

Step 5
Click two times on the circular edge to select it

Step 6
Position the measure by clicking in the screen

3D Measurement Tool
Radius:
Select a point or edge to begin.
1 model unit(s) = 1.0 mm
