

Challenge

Implement automated 3D model-based workflow solution for delivering TDPs that meet certification standards for aerospace manufacturing clients.

Results

- Developed automated process for producing TDPs by configuring 3D PDF template to B/E's internal systems.
- Functional engineering groups produce TDPs significantly faster by bypassing 2D drawings.
- Created more efficient process for customer to verify product meets specifications.

Why Tetra4D?

- PDF from the source, Adobe Partnership
- EOS Solutions, Premier Solution Provider delivered services for creating a standard automation template for TDPs
- Ability to integrate directly with required business systems

“As we learned more about 3D PDF, it was clear to us that implementing a fully integrated 3D PDF solution would create more efficiency for us and our customers.”

- David Ewing, Manager of Automation & Process Development, BE Aerospace Seating Products Group
